

Air Pollution Control Systems

Helping companies breathe easier by providing clean air, improving productivity and reducing costs.

Introducing the ACS Workflow 5000.

This is for those who need to:

- Maintain safe and healthy work conditions;
- Minimize the effects of air pollution on employee health and safety;
- Lower costs while increasing productivity and efficiency;
- Reduce the number of redos:
- Minimize workflow interruptions;
- Decrease employee turnover.

It's a hard job. The ACS Workflow 5000 can make it easier.

Features

- Water filtration system;
- Closed loop plumbing;
- 110 v power supply;
- Made in Canada:
- Self-contained pollution storage for easy removal.

Benefits

- Eliminates 90% of airborne particulates;
- Eliminates costly fabric filters saving on average \$3000 to \$6000 per year per unit;
- Energy-efficient and can save up to 15% per year;
- Cleans up to 5,000 cubic feet;
- Compact and mobile design stays out of the way;
- Clog-free filtration with no loss of air intake suction;
- Serviceable in under 15 minutes;
- No loss of workflow.

How does it work?

Air is drawn through a proprietary matrix of water and interior structures to remove impurities (dust, fumes, etc.). It's easy to set up and maintain. Simply fill the self-contained system with water, place it, and turn it on.

Why now?

Costs and Risks of Air Pollution:

- Almost 1 million workers die each year due to air pollution exposure;
- Many businesses lose between \$75k-\$150k per year due to air pollution (botched/defective work, workflow interruption, etc.);
- Impaired worker performance and safety;
- Damages shop equipment;
- Fire/explosion hazard;
- A shrinking labor pool means keeping workers happy and healthy is even more important.
